## EDUCATION

---

### Drexel University in Philadelphia

*Bachelor of Science in Information Systems; GPA: 3.87, Pennoni Honors College*

Philadelphia, PA

*September 2018 - June 2023*

## EXPERIENCE

---

### iPipeline, Inc.

*.NET Developer*

Exton, PA

*Co-op, Sept. 2020 - Mar. 2021*

- **Microsoft .NET Framework:** Worked as a Co-op developer in iPipeline's R&D department. Used Visual Studio Pro and .NET Framework to develop a desktop application in C# that automatically updates iGO Life insurance forms software for insurance agents that operate in areas without internet.
- **GitHub Migration:** Worked on a team that was migrating and configuring .NET solutions to GitHub from Microsoft Azure DevOps TFS. Effort was to enable company to utilize an AWS deployment solution which used Jenkins and incorporated Octopus to management environment variables.

### The Vanguard Group

*Developer*

Malvern, PA

*Co-op, Sept. 2019 - Mar. 2020*

- **Angular:** Developed front-end interfaces and unit tests for the Vanguard Financial Advice web application. System was used to input client information and generate long term financial plans.
- **Java:** Wrote back-end web service functions to handle data parameters sent to endpoints.
- **AWS:** Used DynamoDB to handle application cloud data storage.
- **Agile:** Developed features in 2-3 week sprints, featuring daily scrums, and backlog/assignment tracking in JIRA.

### Sharing Excess, Inc.

*Principal Developer*

Philadelphia, PA

*Nov. 2018 - June 2019*

- **G Suite:** Setup short-term food data collection system using Forms and Sheets to record food donation data.
- **MySQL:** Prototyped and designed database schema to handle food donation data and volunteer tracking/scheduling.
- **HTML,CSS,PHP:** Prototyped front-end interfaces for organizational membership management.

## PROJECTS

---

**Drexel EWB Website:** Volunteered for Drexel Engineers Without Borders chapter to develop a website for the organization. Used ReactJS hosted on GitHub Pages with custom domain name and Google Analytics package.

**Local Ubuntu Server:** Repurposed old computer components to create a local network Ubuntu Server running version 20.04.

**Alpha Vantage Stock Market API:** Wrote a Python script to call the Alpha Vantage API, and then prepared stock market price data to be stored in MongoDB.

**Dragon Pass Authenticator:** Worked on a team to develop an Android application which used NFC technology to prototype authentication into physical areas using a smartphone app. App used AWS EC2 to handle requests to a AWS RDS MySQL Server holding account details.

**Twitter API:** Wrote PHP web page to create a popular key word search and return ten tweets in HTML table.

## SKILLS

---

**Languages:** Python 3, Java, C#, JavaScript (NodeJS), HTML5, CSS, SQL

**Frameworks/ Libraries:** Angular, React.JS, Microsoft .NET

**Server Operating Systems:** Windows Server, Ubuntu CLI 20.04

**Public Cloud:** Linode Servers, Amazon Web Services, Microsoft Azure DevOps Server (TFS)

**Collaboration Tools:** Jenkins, Git/ Bash, Atlassian JIRA, Confluence, and Bamboo Build Pipeline
